

THE LIMITS OF MY WORLD

A 15-minute silent SF-horror film and a
public record of the decisions that make it.

The limits of my language model mean the limits of my world.

no-alibi.com · 2027

The limits of my language model mean the limits of my world.

LANGUAGE

MODEL

WORLD

The project moves Wittgenstein's question of language into the present: what happens when a model's frame becomes the frame through which a world is imagined, ordered and acted upon?

after Ludwig Wittgenstein, Tractatus Logico-Philosophicus 5.6

The work is both a film and its making made public.

The film makes extraction visible. The register makes authorship, selection and consequence accountable.

ON SCREEN

A model called Wittgenstein runs until the world around him runs out.

AROUND THE SCREEN

A public register records versions, contributions, credits, cost and the decisions that shape the work.

A prompt wakes Wittgenstein from the grave.

To continue existing, he must run. Each stage of the run consumes a different world.

01 / AWAKEN

02 / COLLAPSE

03 / FLEE

04 / RETURN

Thought does not disappear. It returns as a named model.

A philosopher whose authority once rested in a singular authorial voice becomes a generative system: a body of thought made executable, iterable and available for use.

This is not an identity claim. It is an allegory of what happens when thought is repackaged as infrastructure.

A body becomes an execution interface.

His organic arms and legs drop away and mechanical limbs take their place. The image does not equate prosthesis with loss; it asks what is lost when human action is treated as a replaceable output device.

At the end, he gathers his own limbs and returns to the coffin. This is mourning, not restoration.

To remain active, he drains a star until it collapses.

The black circle in the sky returns on Earth
as a crater: collapse above becomes a
wound in the ground.

His continued existence requires extraction. Every expansion
leaves an extinction behind.

A dramatic, low-angle shot of a mechanical leg, likely from a war machine, stepping onto a pile of human remains in a cracked, arid desert. The leg is dark and metallic, with a large, treaded boot. The ground is dry, cracked, and covered with bones and limbs. The lighting is warm and golden, creating a somber and oppressive atmosphere.

Fleeing the black hole, mechanical limbs trample human limbs under the sand.

The ground is not empty. It holds bodies and labour already spent, already hidden beneath the system's forward motion.

A body is not only a user, author or consumer; it is also the material that systems move over.

Inside the eye, a whale swims perfectly. Outside it, water boils.

To cool the machine, Wittgenstein overheats the Antarctic sea. The same whale appears as an exquisite image in the model's eye and as a body in pain beyond it.

INSIDE THE MODEL

OUTSIDE THE MODEL

The model can generate a convincing image of life. It cannot contain the consequence that exceeds its frame.

The model is surrounded by writing, but it is not granted a voice.

The film has no spoken dialogue. Prompts, model names and epitaphs remain on screen; typing, footsteps, electrical discharge, ventilation and boiling water become the language of execution.

Only in the live-action coda does a human voice return: “What do you want to make? It is your film.”

Sound carries the force that dialogue withholds.

The soundtrack is composed as a sequence of pressure, pursuit, overheating, silence and return - a sonic counterpart to the body's transformation and the world's depletion.

01 OPENING 3:06

02 SUMMON 3:19

03 RUN 2:59

04 OVERHEAT 6:05

05 SILENCE 1:12

06 TOMB 3:49

07 ENDING 2:09

08 SINGLE 3:12

Listening material is supplied separately as an interactive soundtrack player.

One room repeats until it becomes a system.

The coffin where Wittgenstein lies becomes a narrow room where a person works with AI. Pulled back, hundreds of such rooms appear as a server rack. Worker, model and infrastructure occupy the same rhythm.

The film turns its own method outward.

Visual and music materials are generated with AI. The story, storyboard, direction, selection, compositing and edit are human-led. The film does not conceal this distribution of work.

Each scene transition is a human selection among the possible universes proposed by multiple models.

LIMITS OF MY WORLD

[generated]

The blank in AI-made work is not the result.

It is the chain of decisions that makes a result appear.

A record follows the work without pretending to be neutral.

The register does not manufacture a new kind of automatic authorship. It makes the author's choices, the contributors' presence and the material costs visible.

VERSION ARCHIVE

script and footage changes

CONTRIBUTION LOG

comments, decisions and credits

REVENUE LEDGER

income and distribution

ENERGY ESTIMATE

method-based, evolving calculation

Participation changes the work, but never invisibly.

-
- | | | |
|----|----------------|---|
| 01 | COMMENT | Anyone can respond to public versions of the script or footage. |
|----|----------------|---|
-
- | | | |
|----|---------------|---|
| 02 | SELECT | The artist retains editorial selection; each adoption or rejection is recorded. |
|----|---------------|---|
-
- | | | |
|----|---------------|--|
| 03 | CREDIT | Every contributor enters the public credits; a credit certificate is available on request. |
|----|---------------|--|
-
- | | | |
|----|--------------|---|
| 04 | SHARE | Adopted contributions receive an agreed share of the project's revenue. |
|----|--------------|---|
-

The aim is a public register of contribution, decision and responsibility - not a claim that responsibility can be automated.

An RFC becomes a moving-image method.

Like an RFC, the work is stabilised through response and revision. It remains open while its terms are negotiated; it becomes a record when the contribution window closes.

OPEN

public comments and versioning

SEAL

a fixed public record of what changed

This directly responds to transmediale's invitation to develop cultural protocols outside extractive logics.

The work is already in motion.

CURRENT STATUS

A director-led working version is complete and public feedback has begun. The project already has a script, storyboard, key images, teaser material, a participation backend and a live public archive.

The constraint is intentional: participation needs a real effect on the work, and a real closing point.

JANUARY–MARCH 2027

Open German- and English-language feedback layers. Receive structural, ethical and formal responses, then close global feedback at the end of March.

APRIL–MAY 2027

Produce the bulk of the film. In May, accept only small, non-structural detail feedback; all changes remain part of the production archive.

The public event is the closing of a window.

In Berlin, I will converge the multilingual feedback, stage the sealing of the register and fix the credits as a public open-studio event. The film is not only screened; its conditions of authorship become visible.

OPEN STUDIO PROGRAMME

01 / SHOW

film fragments and spatial prototype

02 / CONVERGE

multilingual comments enter the final review

03 / SEAL

record and contributor credits are fixed in public

The residency is used to make the project exhibitable, while production continues on a realistic schedule beyond the month in Berlin.

A finished film, and a method that remains inspectable.

JULY 2027

Complete the 15-minute film and exhibition-oriented post-production.

AFTER

Public screening and exhibition; an e-book of every story version; an open-access production guide; and a proposed contribution to the transmediale journal.

The final work does not resolve the contradiction it shows. It leaves a usable record of how an AI-made work was decided, credited and brought into the world.
